

Listening and Learning

A case study on engaging active participation by grassroots practitioners at an international conference

TARA SHINE | Mary Robinson Foundation – Climate Justice
ADP Workshop, Bonn, 5 June 2014

**Mary Robinson
Foundation**
Climate Justice

Climate Justice

- Climate justice links human rights and development to achieve a human-centred approach, safeguarding the rights of the most vulnerable and sharing the burdens and benefits of climate change and its resolution equitably and fairly.
- The work of the Mary Robinson Foundation – Climate Justice is informed by the Principles of Climate Justice:
 - Respect and Protect Human Rights
 - Support the Right to Development
 - Share Benefits and Burdens Equitably
 - Ensure that Decisions on Climate Change are Participatory, Transparent and Accountable
 - Highlight Gender Equality and Equity
 - Harness the Transformative Power of Education for Climate Stewardship
 - Use Effective Partnerships to Secure Climate Justice

Participation – the Climate Justice Approach

- Principle of Climate Justice:
Ensure that Decisions on Climate Change are Participatory, Transparent and Accountable.
- The opportunity to participate in decision-making processes which are fair, accountable, open and corruption-free is essential to climate justice.
- The voices of the most vulnerable to climate change must be heard and acted upon.

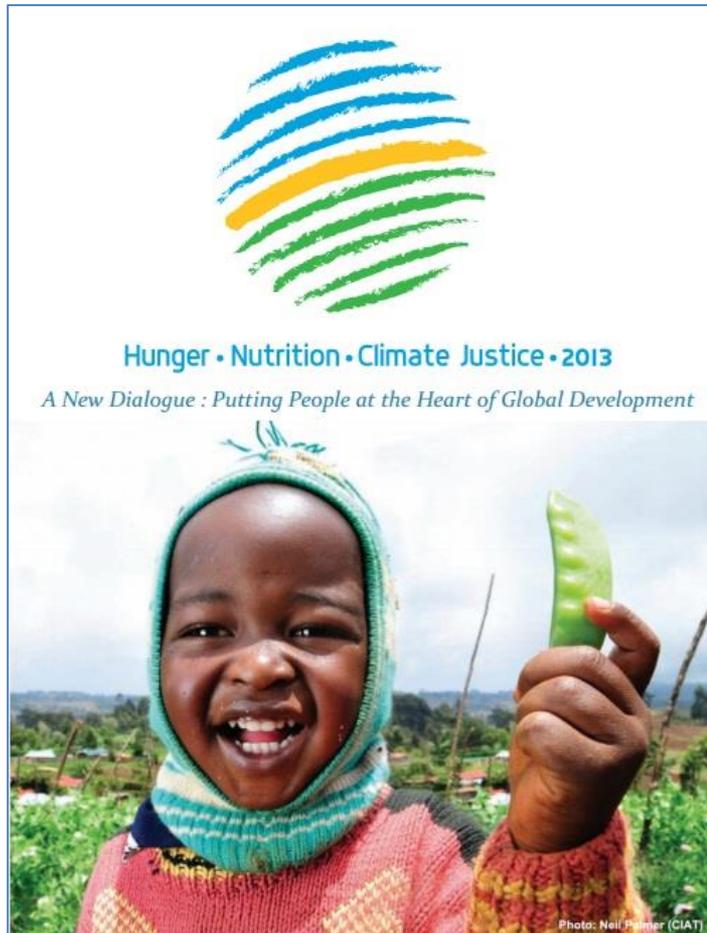

Why Participation?

- Full participation allows all voices to be heard – from key global decision makers to marginalised community members.
- Improving awareness and understanding of climate change is key to winning public support for climate related policies.
- The UNFCCC, through Article 6, calls on governments to educate, empower and engage all stakeholders and major groups on policies relating to climate change.
- Grassroots practitioners and vulnerable communities cannot engage in the global climate negotiations if they don't know about them.
- Widespread participation also allows these policy makers to learn from the people their decisions affect the most.

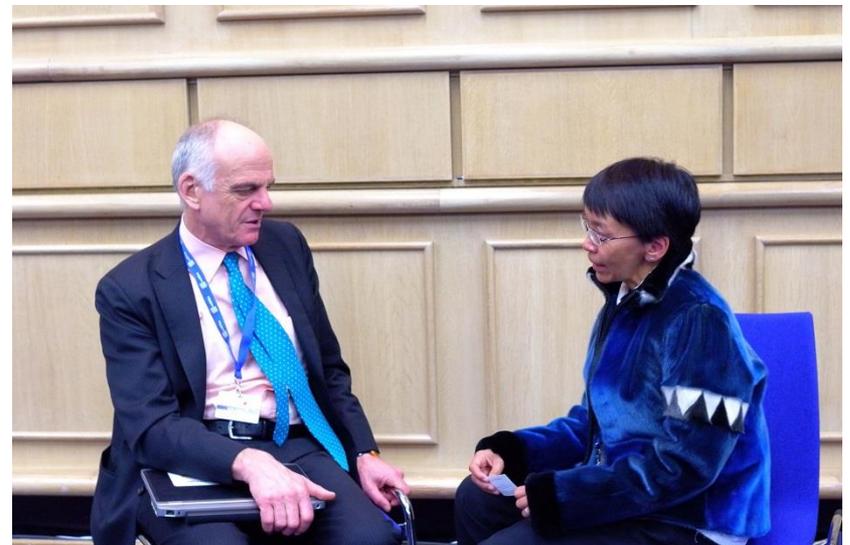

Hunger • Nutrition • Climate Justice

- Held in April 2013, and co-hosted by the Foundation and the Irish Government
- Participation in action
- 300 delegates, 100 of which represented grassroots communities across the world
- The conference sought to amplify the voices of those most affected by climate change – voices which are all too often ignored by global policy makers.

Lessons Learned

- Bringing grassroots practitioners and policy makers together works
 - Grassroots representatives have the knowledge and ability to solve problems relating to climate change in their own areas
 - Bridging between these groups can inform effective climate solutions.

Lessons Learned

- The capacity of grassroots representatives needs to be strengthened to enable them to engage.
 - Policy makers need to take the time to ensure grassroots communities are engaged and aware of the processes in train in climate and development negotiations.
 - Grassroots practitioners have knowledge and skills to share.
 - High level policy makers have a responsibility to amplify their voices and empower them to tell their stories.

Lessons Learned

- Strengthening institutions and establishing platforms for real dialogue among all stakeholders is necessary to catalyse change.
 - Real dialogue achieved using accessible language and innovative means of communication.

- Women are at the heart of effective solutions – there can be no real solutions without women’s involvement.
 - Women made up 46% of conference delegates
 - Equal rights are essential for women’s inclusion in these solutions

Lessons Learned

- The negative impact of climate change on the food and nutrition security of vulnerable households is an injustice, as they have done least to cause climate change.
- We should not be afraid to empower people and protect rights. Giving power to another can lead to positive change.
- By placing people at the centre, the clearest picture of the crisis facing the world's most vulnerable emerges.
